

Title:

Vic's Clothing Store

Description:

The website will be a multi-page web page that implements an ecommerce style website. The website will have a general storefront home page and a category page that showcases the items for sale. Users will be allowed to click to view each individual item and be able to add to cart for purchase. The site shall include custom navigation, able to keep user data locally, and the ability for administrators to add new items to catalog.

Data will be stored locally when users visit the site. We shall keep track of the items that the user adds to their personal cart. The administrators are able to edit/update/add/delete items from the catalog. There will be implementation of user data storing for logins and passwords.
